AMENDMENT TO THE CLAIMS

1.(Currently Amended) A computer-readable medium providing a computer-loadable data structure representing a state-and-transition-based description of a speech grammar, the data structure comprising:

rule entries, each rule entry representing a group of transitions;

- a first transition entry representing a transition from
 a first state; and
- a second transition entry representing a second transition from the first state, the second transition entry being contiguous with the first transition entry and having a last-transition value set to indicate that the second transition is the last transition from the first state, wherein at least one transition entry has a content index value that is an index to a rule entry in the rule entries.
- 2.(Original) The computer-readable medium of claim 1 wherein each transition entry has a fixed size.
- 3.(Original) The computer-readable medium of claim 2 wherein the data structure further comprises a word string comprising words found in the speech grammar.
- 4.(Original) The computer-readable medium of claim 3 wherein each transition entry has a content index value that designates content associated with the transition.
- 5.(Original) The computer-readable medium of claim 4 wherein at least one transition entry has a content index value that is an index into the word string.

- 6. (Canceled)
- 7. (Canceled)
- 8.(Currently Amended) The computer-readable medium of claim 7 be wherein each transition entry further comprises a rule reference flag field that indicates whether the content index value is an index into the word string or an index to a rule entry.
- 9. (Currently Amended) The computer-readable medium of claim 71 wherein each rule entry is a same fixed size as all other rule entries.
- 10.(Original) The computer-readable medium of claim 9 wherein each rule entry comprises a starting transition value that provides an index to a transition entry that represents the first transition for the rule.
- 11. (Canceled)
- 12. (Canceled)
- 13. (Currently Amended) The computer-readable medium of claim 2712 wherein each semantic entry further comprises a transition index value that provides an index to a transition entry that represents the transition associated with the semantic information of the semantic entry.
- 14. (Canceled)
- 15. (Canceled)

- 16. (Canceled)
- 17. (Canceled)
- 18. (Canceled)
- 19. (Canceled)
- 20. (Canceled)
- 21. (Previously Presented) A computer-readable medium that provides a computer-loadable data structure representing a speech grammar, the data structure comprising:
 - a string of words containing words in the speech grammar; and
 - a set of fixed size transition entries, each transition entry representing a transition in a structure that describes the speech grammar and each transition entry having a same fixed size as all other transition entries in the set of transition entries, at least one transition entry making reference to a word in the string of words.
- 22. (Previously Presented) The computer-readable medium of claim 21 wherein the data structure further comprises:
 - a set of fixed size rule entries, each rule entry representing a collection of transitions in the structure, each rule entry having the same fixed size as other rule entries and each entry including an index to a transition entry that represents the first transition in the collection of transitions.

- 23. (Original) The computer-readable medium of claim 21 wherein each transition entry comprises a last transition flag that indicates whether the transition for the transition entry is the last transition from a state in the structure.
- 24. (Original) The computer-readable medium of claim 21 wherein each transition entry comprises a semantic tag flag that indicates whether semantic information is associated with the transition for the transition entry.
- 25. (Original) The computer-readable medium of claim 24 wherein the data structure further comprises:
 - a string of symbols comprising text representing semantic tags and semantic values; and
 - a set of fixed size semantic entries, at least one semantic entry making reference to a semantic tag in the string of symbols.
- 26. (Original) The computer-readable medium of claim 21 wherein each transition entry comprises a next transition field that provides an index to a transition entry that represents a next transition in the structure.
- 27. (New) A computer-readable medium providing a computer-loadable data structure representing a state-and-transition-based description of a speech grammar, the data structure comprising:
 - a first transition entry representing a transition from a first state;
 - a second transition entry representing a second transition from the first state, the second transition entry being contiguous with the first transition entry and having a last-transition

value set to indicate that the second transition is the last transition from the first state; a symbol string formed of a sequence of symbols; and a set of semantic entries, each semantic entry representing semantic information associated with a transition in the grammar and each semantic entry comprising a name offset that provides an offset to a symbol in the symbol string, the symbol identified by the offset representing a semantic tag.
